WORK EXPERIENCE

Freelance Web Developer | Toronto, Ontario, Canada | 2022 – Present

- Worked on several Web Development projects for a small business using Visual Studio Code, Node.js, and a website for a non-profit organization using Wix.
- Collaborated with clients to gather project requirements, understand their business goals, develop and provide appropriate solutions.
- Worked closely with a team of developers to design and develop best solutions according to the client requirements and ensure that projects were delivered on time.
- Conducted quality assurance testing and debugging to ensure applications met client expectations.

PROJECTS

Website for a non-profit organization “Ukrainian Resistance Canada”

January – February 2023

- Designed and developed a responsive website using Wix.
- Implemented such features as contact form, dynamic map, upcoming event page, collection of past events, and donations
- Conducted quality assurance testing to ensure a seamless user experience.

Personal full-stack “Museum API” website

March – April 2023

- Developed a responsive website using React.js, React Bootstrap
- Implemented custom features such as product search, product filter, user’s registration, and user’s login
- Utilized Node.js, Next.js for server-side rendering, managing data and API endpoints
- Used MongoDB database to store client and product information
- Conducted quality assurance testing and debugging to ensure an unimpeded user experience

Personal full-stack “E-Commerce” website

May – June 2023

- Implemented a responsive user interface using React.js, ensuring a seamless browsing experience
- Utilized Redux for state management, allowing for efficient data handling
- Employed styled components to create modular and reusable UI components
- Developed a secure user authentication system, incorporating features such as user login, registration, and logout functionality.
- Implemented a cart feature that allows users to add products, view and modify them, and save their cart for future sessions.
- Ensured data integrity and security by utilizing Express.js and Node.js for server-side development, along with JWT for secure authentication and authorization.
- Leveraged API requests to retrieve product information from a MongoDB database
